

## PARTS LIST

# ASSEMBLY

STEP 1: Put the folded frame upside down and extend the legs. One section.

NOTE: Sometimes the second section can be pulled out. Stop and make sure that the correct section is extended.

**STEP 2: Flip frame to its feet and expand the frame.**

**NOTE: For larger frame size, it is better to work with a helper**

**NOTE: When expanding the frame make sure to expand evenly in all directions, so the parts do not skew and get stuck. When fully expanded, make sure it is locked in place.**

**STEP 3: Place the Roof Panel on top of the frame.**

**NOTE: Placing the roof at this stage, before fully extending the legs is easier, especially if you have low ceiling.**

**STEP 4: Extend the legs and adjust to comfortable height.**

**NOTE: There are three height options to choose from.**

**STEP 5: In this AVB6 model, the walls are attached to the roof panel directly via the continuous Velcro strip.**

**NOTE: Start at center of frame and work your way around.**

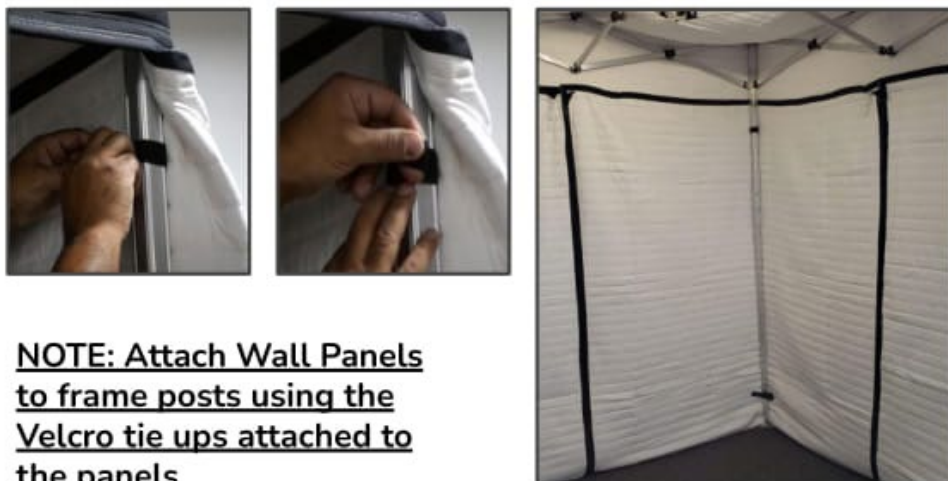

**NOTE: Depending on the model, the four Wall Panels can be joined together by Zipper (shown) or Velcro.**

**NOTE: We provide a Zipper opening for the front entrance.**

**NOTE: Attach Wall Panels to frame posts using the Velcro tie ups attached to the panels**

**NOTE: The provided LED light can be simply placed on the frame at a convenient location. Run the cord under the panels and connect to an outlet.**
